

# Education evenings 2018

*Practical introduction  
to groundwater modelling*

Computer exercises  
00 01 Things to do before the course

1

## Download

✓ Course material at  
[http://tiny.cc/bch\\_gwmod-2018](http://tiny.cc/bch_gwmod-2018)

2

## Extract

- ✓ Zipped folder

to a location of your choice. Make sure the folder can stay at this location during all three sessions, as we will need to point several programs to the location of executables in the /bch\_gwmod-2018/05\_software/ subfolder.

3

## Install

- ✓ GW\_Chart

- ✓ ModelMuse

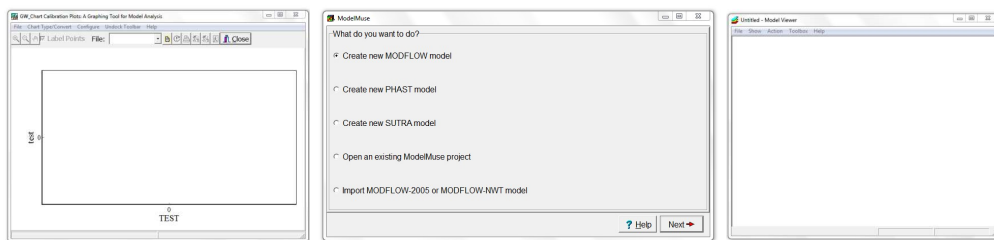

- ✓ ModelViewer

by executing the installers located in the respective subfolders of /05\_software/, and going through the setup. Make sure you select the correct installer for ModelMuse (32 or 64 bit), based on your machine architecture. The remaining subfolders contain executables that do not need to be installed.

4

## Check

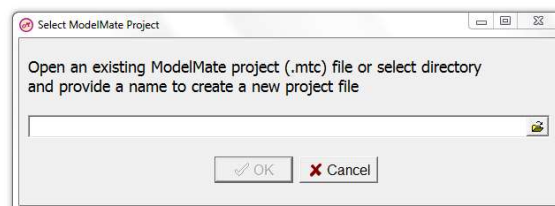

- ✓ If installation was successful by starting GW\_Chart, ModelMuse and ModelViewer. You should get the following starting screens (or something very similar):

5

## Also check

- ✓ If ModelMate works correctly by executing `/05_software/modelmate/modelmate-1.0.3.exe`. You should get the following start screen:

6

## You might want to

- ✓ Add shortcuts to your desktop or start menu for the /bch\_gwmod-2018/ folder, GW\_Chart, ModelMuse and ModelViewer, and the modelmate-1.0.3.exe executable
